

Here are the lists of essential packages for Sublime + Laravel + PHP

1. Set the custom preferences from preferences > setting for own styling of the fonts type, fonts size, margin etc.
2. Install Packages
 - Shift + command + p > install packages (This will install necessary packages)
 - 3.

3. Ctrl + D will select all the same word in the code to change at once

4. Emmet package help us to shorten the writing whole code.

Suppose html:5 and hit tab

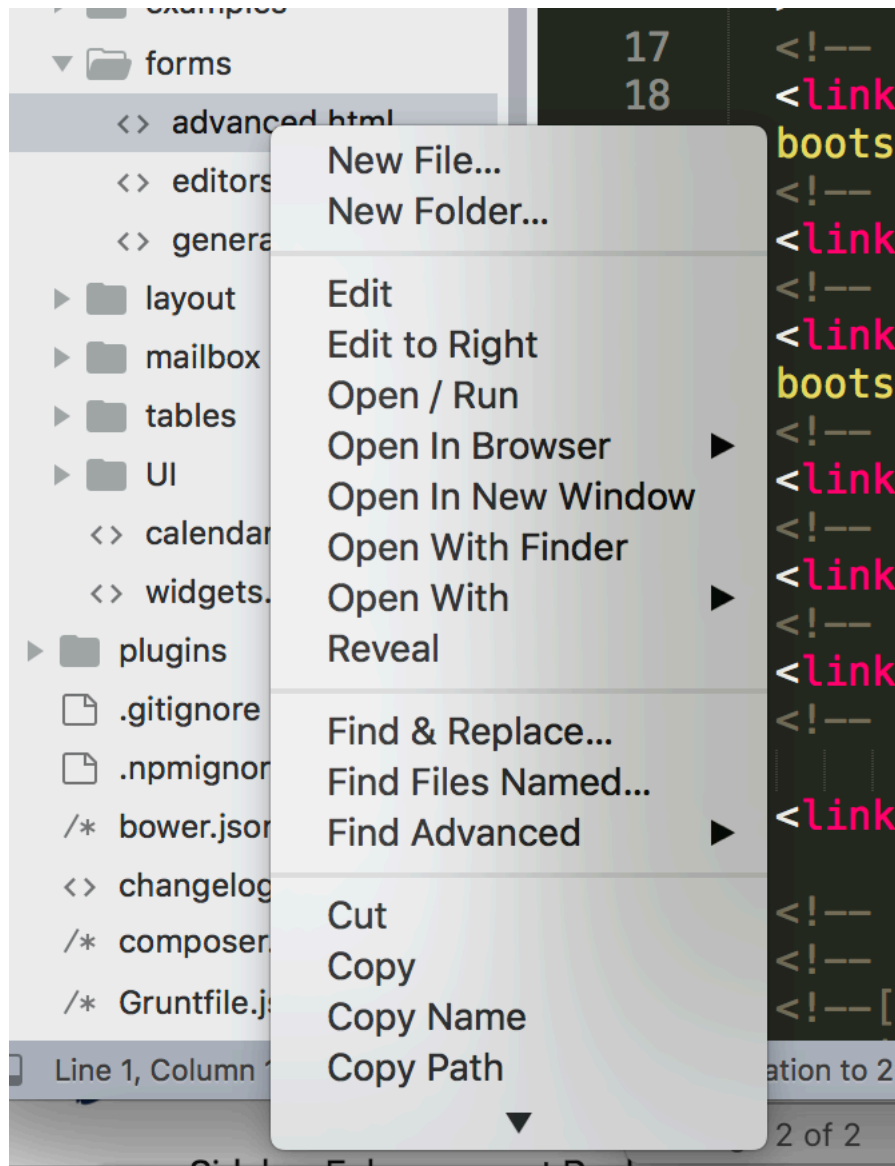

To create class

.container>.row>table.table>(thead>th*5)+(tbody>tr>td*5)

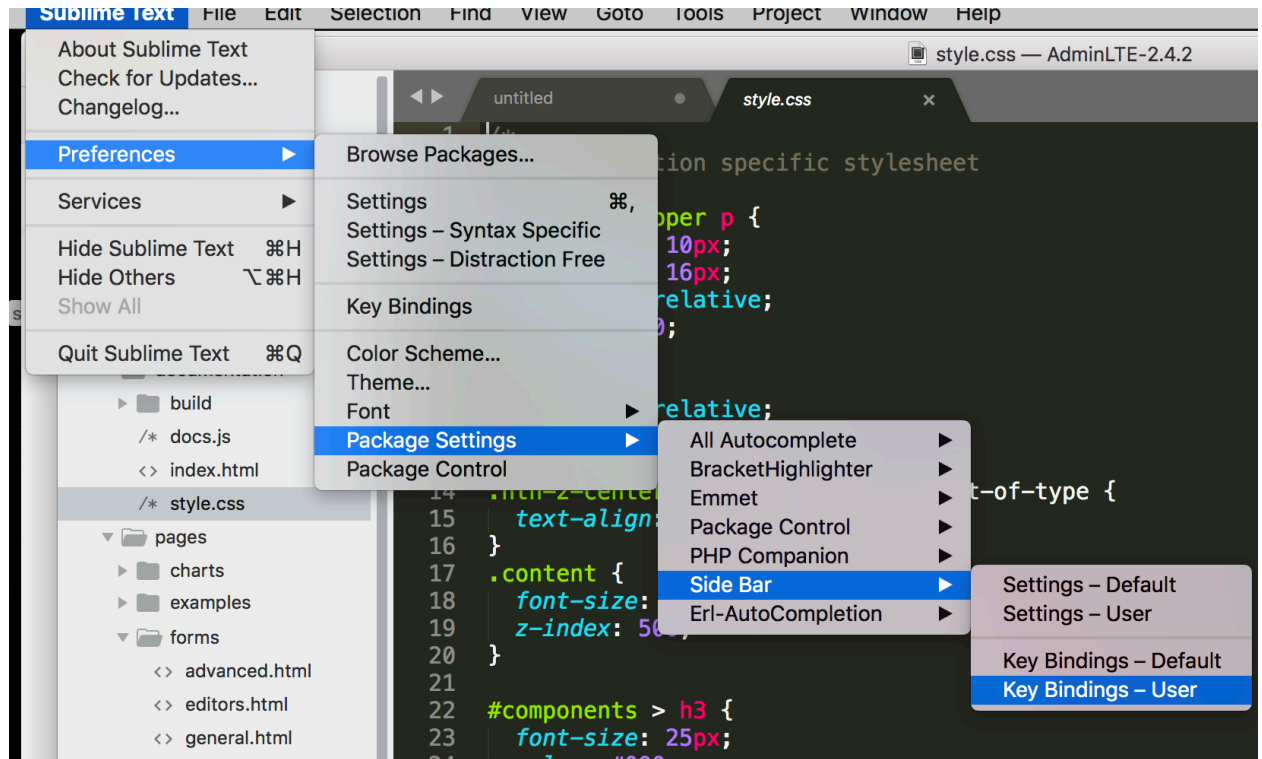

will create

```
<div class="container">
  <div class="row">
    <table class="table">
      <thead>
        <th></th>
        <th></th>
        <th></th>
        <th></th>
        <th></th>
      </thead>
      <tbody>
        <tr>
          <td></td>
          <td></td>
          <td></td>
          <td></td>
          <td></td>
        </tr>
      </tbody>
    </table>
  </div>
</div>
```

5. Next awesome package is for sidebar
- sidebarEnhancement – gives you lots of options within the sublime text

Also

This helps to create our own short-cut_keys

```

1  [
2      {
3          "keys" : ["ctrl+alt+f"],
4          "command" : "side_bar_new_file"
5      }
6      {
7          "keys" : ["ctrl+alt+r"],
8          "command" : "side_bar_rename"
9      }
10 }
11 ]

```

6. AllAutocomplete – will help to autocomplete the php and html code

7. This is for laravel only- blade snippet and laravel blade highlighter
8. jQuery package for all the jQuery codes
9. BracketHighlighter helps to find whether the brackets are closed or not.
